

One dashboard. Eighteen AI specialists. *Every application, handled.*

Career Copilot turns a resume and a job posting into a complete, verified application package — tailored resume, ATS score, company research, gap analysis, interview prep, and outreach drafts — in minutes, not a weekend.

18

AI agents, each with one job

15+

documents produced per application

<5 min

from upload to full package

— THE PROBLEM

A serious application eats a weekend, one tab at a time.

Every candidate re-does the same fragmented work — and there's no way to know if any of it is actually good until a recruiter responds, or doesn't.

~45 min

Decoding the job post

What's the real bar, versus boilerplate?

~30 min

Researching the company

Culture, products, recent news — from memory or a rushed search

~90 min

Tailoring the resume

ATS-safe and human-readable, without breaking either

~60 min Finding the real gaps
Which weaknesses will a recruiter actually notice?

~90 min Interview prep
Building answers under time pressure, the night before

~45 min Outreach & cover letter
Six different documents, written from scratch each time

— THE SOLUTION

18 specialists, one pipeline, no guesswork about what ran.

Career Copilot doesn't send one prompt and hope. It runs 18 purpose-built AI agents in the correct order — each one doing a single job well — then checks its own work before calling anything finished.

WHAT COMES OUT

One run produces the entire application package.

Every document is grounded in the candidate's actual resume and the actual job post — nothing is invented to fill a gap.

01

Tailored resumes

ATS, recruiter, startup, and enterprise versions — same facts, framed for each reader.

02

ATS score & report

A scored, itemized read on parsing compatibility and keyword coverage.

03

Company research

Live-researched culture, products, tech stack, and recent news — not memorized and stale.

04

Skill gap analysis

Requirement-by-requirement: present, missing, or present but weakly evidenced.

05

Interview questions

Real questions with resume-backed answers — or an honest gap flag where none exists.

06

Cover letter & outreach

Six drafted assets: cover letter, recruiter message, referral ask, follow-ups.

07

Learning plan

A sequenced plan to close real gaps, with real courses and a certification ROI read.

08

Go / no-go verdict

A single readiness signal from the governance layer — not a pile of files to judge yourself.

— WHY TRUST IT

It checks its own work before calling anything done.

✓ **Nothing is invented.** Where evidence is missing, the system says so — it never fabricates a fact, a source, or a story to fill a gap.

✓ **A dedicated review agent** re-checks every other agent's output — recomputing numbers, not just re-reading prose — before the run is marked ready.

✓ **Real-world facts are researched live**, not recalled from memory, so company details and market data stay current.

CAUGHT IN REVIEW, THIS QUARTER

The review agent found that one agent's stated total didn't match the sum of its own line items — "**~45–55 hours**" claimed, but the actual line items added to **30–44** . Flagged automatically, fixed before delivery. That's the review layer working as designed.

The system catalog updates itself.

Add, remove, or change an agent and the dashboard's execution graph, dependency map, and settings catalog reflect it automatically — no separate UI work required to keep pace with the product.

— WHERE THIS GOES

Shipped, and what's next.

SHIPPED

Today

- All 18 agents built and verified
- Live dashboard, end to end
- Full application history & analytics

NEXT

Validate at scale

- Test against a wide range of real resumes
- Track cost & accuracy per run
- Multi-user access

LATER

Prove the outcome

- Correlate usage with interview & offer rates
- Automate the full workflow end to end
- Decide on pricing & access model

— TRY IT

Run it on a real application this week.

The fastest way to evaluate Career Copilot is to run it against a role the team is actually hiring for, and read the output next to what we'd have produced by hand.

18 agents, live today

SQLite + Streamlit, runs locally, no infrastructure to stand up

Demo mode available with no API key for a first look

Career Copilot — internal product overview. Screenshots captured from a live run of the actual application.
